Display For a TV wall bracket, “display” really means compatibility with your screen. Product A supports 26-55 inch TVs, VESA 100x100mm to 400x400mm, and up to 36kg. Product B stretches further, supporting 26-70 inch TVs, with a heavier 45kg load rating and a pull-out design with 36.8cm extension. Winner: Product B, because it covers a wider range of TV sizes and gives more headroom for larger sets, which matters if you plan to upgrade later or already own a bigger TV.

Performance Performance here is about how well the mount actually does its job: holding the TV securely, allowing tilt and swivel, and giving you useful viewing flexibility. Both products are full-motion mounts, so both can improve viewing angles in typical UK rooms where glare from windows is a problem. Product B has the edge because the pull-out design and higher weight limit suggest a more robust mechanism for larger TVs, while Product A is better suited to lighter, smaller sets. If your TV is under 55 inches and well within 36kg, Product A will perform perfectly well; but Product B is the stronger performer overall for flexibility and heavier screens. Winner: Product B.

Build quality and design Amazon Basics is usually aimed at straightforward, no-fuss practicality, and Product A reflects that: simple, compact, and likely easy to fit in smaller rooms. Its lower price suggests a more stripped-back design, which is not a bad thing if you want a clean install and your TV is modest in size. Suptek’s MA001 is marketed as a heavy-duty UK-home bracket with a slim 36.8cm extension, and the 45kg rating indicates a sturdier build. That extra capacity and extension range make it the better choice if you want a mount that feels more substantial and versatile. Winner: Product B, for stronger build confidence and more premium functionality.

Battery life Neither product has battery life, so this category doesn’t apply. For wall brackets, the real equivalent is long-term reliability and whether the mount continues to hold alignment without sagging. On that basis, Product B gets the nod because the higher 45kg rating implies better tolerance for heavier TVs over time. Winner: Product B.

Price and value for money This is where Product A shines. At £16.94, it is £11.05 cheaper than Product B, and it also has the stronger customer proof: 4.6/5 from 61,675 reviews versus 4.4/5 from 5,891 reviews. That huge review count is a major trust signal, especially for a product where safety and ease of installation matter. If your TV fits within its 26-55 inch and 36kg limits, Product A is exceptional value and likely the smarter buy for most households. Winner: Product A.

Game library/features Neither product has a game library, but the equivalent here is feature set. Product B offers more useful hardware features for real-world use: a larger size range, higher load capacity, and a pull-out design with 36.8cm extension. Product A still covers the essentials well, including tilt and swivel, and supports both flat and curved TVs, but it is more basic in scope. Winner: Product B, because it offers more flexibility and future-proofing.

Overall user experience Product A is the easier recommendation if you want a low-cost, highly trusted mount for a mainstream TV. The enormous review count and very strong 4.6-star rating suggest lots of buyers have had a good experience, and the price is hard to argue with. Product B is better if your TV is larger, heavier, or you want a more adaptable full-motion setup with extra extension from the wall. In day-to-day use, that means better positioning for corner installs, wider seating arrangements, and larger living rooms. Winner: Product A for simple, affordable confidence; Product B for flexibility and heavy-duty use.

Overall summary: If your TV is 55 inches or smaller and under 36kg, Amazon Basics is the better buy because it is much cheaper and backed by far more reviews. If you need a bracket for a bigger TV, want more pull-out reach, or prefer higher load capacity, Suptek is the stronger long-term option. For most UK buyers with a standard 32-55 inch set, Product A is the definitive value winner. For larger TVs, Product B is the safer and more versatile choice.

Winner: a

Amazon Basics wins for most people because it offers the best mix of price, trust, and compatibility. At £16.94, it is £11.05 cheaper, yet it still supports up to 55-inch TVs, VESA up to 400x400mm, and 36kg. The 61,675 reviews and 4.6/5 rating are especially persuasive for a product where reliability matters. Unless you specifically need the extra size and weight capacity of the Suptek, the Amazon Basics bracket is the better value buy.

Buy Product A If...

Buy Product A if your TV is 26-55 inches and weighs under 36kg, and you want the cheapest safe option from a very well-reviewed brand. It is ideal for standard UK living rooms, bedrooms, or kitchens where you just need tilt and swivel without paying extra for heavy-duty capacity.

Buy Product B If...

Buy Product B if your TV is larger than 55 inches, heavier than 36kg, or you want more pull-out flexibility from the wall. It is also the better choice if you’re planning for a future TV upgrade and want a mount that won’t need replacing as soon.
